(54) Title: ACTIVE MATRIX DISPLAY

(57) Abstract: An active matrix display is provided with conductor lines (62a, 62b, 62c) extending along edges of the display over the display substrate but outside the display area (63). These conductor lines comprise at least one layer (90) which is additional to the thin film layers defining the array of pixels. Row driver circuitry and/or column driver circuitry has a portion (40,50) provided on the common substrate outside the display area (63) and which connects to the conductor lines. A dedicated process can be used for the conductor lines in order to form a low resistance lines. These assist in the integration or mounting of row or column driver circuits onto the common substrate.
